CURRENT ACADEMIC APPOINTMENTS

2025 - present. Associate Professor of Clinical Virology (Maître de Conférences des Universités - Praticien Hospitalier, MCU-PH), Université Paris Cité and Necker-Enfants Malades Hospital, AP-HP, Paris. The MCU-PH is a permanent dual academic and hospital faculty appointment in the French hospital-university system, awarded through national competitive recruitment (CNU section 45.01, Bacteriology-Virology-Hospital Hygiene). It combines faculty responsibilities (research and teaching) at Université Paris Cité with duties as attending clinical virologist at Necker-Enfants Malades Hospital, the French national pediatric and rare-disease referral center.

February 2026 - February 2027. Visiting Scholar, laboratory of Prof. Charles Y. Chiu, University of California, San Francisco. One-year research residency (February 8, 2026 to February 7, 2027) funded by a competitive AP-HP international mobility grant; host and pathogen metatranscriptomics (RNA-seq) applied to unexplained fetal demise (MetaHCN project).

2024 - present. Head, Clinical Metagenomics Program, Necker-Enfants Malades Hospital, AP-HP. One of only four laboratories in France holding the national reference laboratory label (LBMR) for clinical metagenomics; ISO 15189 accredited.

2023 - present. Deputy Head, Associated Laboratory of the French National Reference Center (CNR) for Herpesviruses, in charge of congenital CMV infection (term 2023-2027).

Research affiliation: URP 7328 FETUS (fetal medicine and in utero therapeutics research unit), Université Paris Cité.

RESEARCH FOCUS

I am building an independent research program at the interface of clinical virology, genomics, and translational medicine, organized around one continuous arc: **unbiased sequencing (clinical metagenomics and metatranscriptomics) as a discovery and diagnostic engine; characterization of the emerging and unusual viral diseases it reveals; a focus on vulnerable hosts (immunocompromised patients, the fetus and neonate); and translation into accredited diagnostics, treatment decisions, national screening policy, and infectious disease preparedness.**

This program has produced the identification or first clinical characterization of several viral diseases, including the first hepatotropic human circovirus (HCirV-1), chronic Aichi virus disease in inborn errors of immunity, occult rat hepatitis E virus (Rocahepevirus rattii) infection as a cause of cirrhosis, and fatal pigeon paramyxovirus type 1 encephalitis, together with a national prospective evaluation of clinical metagenomics (The Lancet Microbe) and reference-level contributions to congenital CMV diagnosis and prevention at the time France adopted universal first-trimester CMV screening.

Areas of expertise: clinical metagenomics and pathogen discovery; emerging and unusual viral infections; infections in immunocompromised hosts; congenital and maternal-fetal viral infections; neurological viral infections; viral hepatitis of unknown origin; viral genomics and sequencing-based surveillance; diagnostic development and accreditation; infectious disease preparedness.

EDUCATION AND POSTGRADUATE TRAINING

Habilitation à Diriger des Recherches (HDR), Université Paris Cité: in preparation. (*French postdoctoral qualification authorizing independent doctoral supervision, comparable to a promotion criterion for senior faculty.*)

2023. PhD in Virology, Université Paris Cité (doctoral school ED 563 MTCI), Paris. Thesis: *Identification of viruses involved in unexplained diseases of immunocompromised patients*. Advisor: Dr Marianne Leruez-Ville. Awarded the Prix Silviane Chatelain 2023 of the French National Academy of Pharmacy.

2021. MSc (Master 2) in Molecular and Cellular Biology, Virology track, Institut Pasteur / Université Paris Cité, Paris. Research placement in the Pathogen Discovery Laboratory, Institut Pasteur: NGS metagenomics applied to clinical microbiology.

2019. PharmD (Doctor of Pharmacy), Université de Limoges. Thesis: the 2017-2018 measles outbreak in Nouvelle-Aquitaine, France.

2015 - 2019. Residency in Medical Biology (DES de Biologie Médicale), specialty Microbiology (French clinical laboratory medicine residency; four-year, eight-rotation program). Rotations included clinical virology and bacteriology (Bordeaux University Hospital), the National Reference Center for arboviruses, respiratory viruses and hantaviruses at Institut Pasteur de Cayenne (French Guiana), and medical biology at Mayotte Hospital (Indian Ocean), including outbreak response experience.

2022. French national board certification for hospital practitioners (Concours National de Praticien Hospitalier), Medical Biology.

Complementary university diplomas: HIV infection (Université des Antilles-Guyane, 2019); infectious diseases of pregnancy, the fetus and the newborn (Université Paris-Saclay, 2021).

ACADEMIC AND HOSPITAL APPOINTMENTS

Period	Position
2025 - present	Associate Professor of Clinical Virology (MCU-PH) , Université Paris Cité / Necker-Enfants Malades Hospital, AP-HP, Paris
2023 - 2025	University Hospital Practitioner (Praticien Hospitalier Universitaire, PHU) , same unit; intermediate hospital-university faculty position
2019 - 2023	Hospital-University Assistant (Assistant Hospitalier Universitaire, AHU) , same unit; junior faculty position combining clinical service, teaching, and research
Jan - Jun 2024	Visiting Researcher (academic secondment) , laboratory of Prof. Judith Breuer, UCL Great Ormond Street Institute of Child Health, London, UK. CMV whole-genome sequencing (SureSelectXT target enrichment, HaROLD haplotype reconstruction) and CMV genomic diversity in congenital infection
Feb 2026 - Feb 2027	Visiting Scholar , laboratory of Prof. Charles Y. Chiu, UCSF, San Francisco, USA

RESEARCH LEADERSHIP AND MAJOR RESEARCH PROGRAMS

1. Clinical metagenomics and pathogen discovery (program builder and lead)

- Co-developed (2019-2024, with Dr Anne Jamet) and now sole head (since March 2024) of the clinical metagenomics program of Necker-Enfants Malades Hospital, supervising a dedicated team of three specialized technologists and rotating junior physicians.
- Program growth under this leadership: from 192 samples (2020) to more than 800 projected for 2026; more than 2,500 clinically indicated samples analyzed since 2019 (tissue biopsies, CSF, amniotic fluid, stool, blood); 45-50% external referrals from rare-disease reference centers across the Paris region, providing direct access to deeply phenotyped patient cohorts.
- Led the program to national reference status: **LBMR label** (national reference medical biology laboratory for clinical metagenomics of maternal-fetal, pediatric and immunodeficiency-associated infections, 2024; one of only four such labels in France) and **ISO 15189 accreditation** for clinical metagenomics (COFRAC, scope MG06, 2025).
- First-author of a 3-year national prospective evaluation of clinical mNGS (742 samples, 523 patients; The Lancet Microbe 2024).
- Pathogen discovery and characterization of emerging viral diseases arising from this program: first hepatotropic human circovirus, HCirV-1 (co-first author, Emerg Infect Dis 2023; co-inventor of the associated patent); chronic Aichi virus disease as a new clinical entity in inborn errors of immunity (first author, Clin Infect Dis 2023); occult rat hepatitis E virus infection causing cirrhosis with post-transplant recurrence (first author, Am J Transplant 2026); fatal pigeon paramyxovirus type 1 encephalitis, One Health investigation (co-senior author, Emerg Infect Dis 2026); human coronavirus OC43 encephalitis treated with remdesivir (first author, J Med Virol 2025); enteric-virus-associated hepatitis (EVAH) in transplanted SCID patients (co-first author, J Allergy Clin Immunol 2022).
- Current expansion: targeted viral capture (Twist Comprehensive Viral Research Panel) as second-line diagnostics; cell-free RNA approaches for unexplained hepatitis (HEPIC-META, submitted).

2. Congenital CMV infection: from reference diagnostics to national screening policy

- Deputy head of the associated laboratory of the French National Reference Center for congenital CMV: approximately 500 maternal serology expert reviews, 500 amniotic fluid prenatal diagnoses, 2,000 neonatal samples, and 400 retrospective dried blood spot diagnoses annually; weekly national multidisciplinary fetal medicine board.
- First author on neonatal prognostic factors in the multicenter Cymepedia cohort (253 neonates, 11-13 centers; Pediatrics 2024) and on CMV vertical transmission risk stratified by IgG avidity and valgacyclovir treatment (561 pregnant women; Clin Infect Dis 2025), two studies directly informing practice as France adopted universal first-trimester CMV screening (2025 national recommendation).
- Co-inventor of **MyCMV**, a decision-support algorithm for CMV serology interpretation in pregnancy (AP-HP software invention declaration); coordinating investigator of its multicenter validation study (NCT06694428).
- Established an independent line on CMV genomic diversity in congenital infection through a self-initiated collaboration with UCL Great Ormond Street Institute of Child Health (Prof. Judith Breuer, Dr Cristina Venturini), including a 6-month research secondment (2024) and co-supervision of two master's students on this theme.
- NGS-based CMV antiviral resistance genotyping development (LUCY-1 substudy, supported by a French Society for Microbiology grant).

3. Host and pathogen metatranscriptomics in unexplained fetal and perinatal disease

- Coordinating investigator of METAHCN (metatranscriptomics of trophoblast biopsies, 80 patients enrolled) and scientific lead of MetaMFIU (metatranscriptomic NGS of fetal and placental tissues in unexplained intrauterine fetal demise).
- Currently embedded for one year in the Chiu laboratory (UCSF) to build the corresponding RNA-seq analysis pipeline and host-response analytics, bridging the Necker cohorts with UCSF genomics expertise.

RESEARCH FUNDING

ANRS-MIE (France's national agency for research on HIV, viral hepatitis, and emerging infectious diseases) grants are awarded through peer-reviewed national competitive calls. Amounts are totals awarded.

Active or starting

- **SENTINEL**. Clinical mNGS of stool and urine in 120 immunocompromised patients. ANRS-MIE, competitive call Rech-MIE 2023-3. Role: **Coordinating Investigator (national PI)**. **€435,000**, 24 months. Enrollment began April 2026.
- **MetaMFIU**. Metatranscriptomic NGS of fetal and placental tissues in unexplained intrauterine fetal demise. ANRS-MIE, competitive call Rech-MIE 2024. Role: **Scientific Lead**. **€420,000**, 24 months. Start planned late 2026.
- **EVAHPAD**. Chronic hepatitis and enteric viruses in humoral immunodeficiencies. ANRS-MIE, 2023. Role: **Lead of the virology work package (Team B coordinator)**. **€100,000** (virology work package), 24 months. Ongoing; 117 patients enrolled.
- **METAHCN**. Metatranscriptomics of trophoblast biopsies. AP-HP Clinical Research Contract (CRC), competitive institutional call, 2021. Role: **Coordinating Investigator**. **€50,000**, 24 months. Ongoing; 80 patients enrolled.
- **MyCMV validation study** (NCT06694428), multicenter. Role: **Coordinating Investigator**.

Under review

- **HEPIC-META**. Unexplained hepatitis: targeted viral capture, mNGS and cell-free RNA. ANRS-MIE 2026. Role: **Coordinating Investigator**. Submitted March 2026.

Competitive fellowships

- AP-HP International Mobility Grant (2025): one-year visiting scholarship, Chiu laboratory, UCSF.
- French Society for Microbiology, "Virus et Greffes" mobility grant (2024): NGS vs Sanger CMV antiviral resistance genotyping (LUCY-1 substudy).
- Cyme-Immune philanthropic funding (Fondation Carrasso): supports the PhD student I co-supervise (see Mentoring).

PUBLICATION METRICS

58 peer-reviewed publications (Web of Science; 56 indexed plus 2 published mid-2026 pending indexing) · 1,690 citations · h-index 17 (*Web of Science, August 2026*). 17 publications as first, co-first, or co-senior author.

SELECTED PUBLICATIONS

Ten publications most representative of the research program (author position annotated).

1. **Fourgeaud J**, et al. Performance of clinical metagenomics in France: an observational prospective study. **Lancet Microbe**. 2024. (*first author*) - 3-year national prospective evaluation of clinical mNGS (742 samples, 523 patients); reference study for the field in France.
2. **Fourgeaud J**, Veyrenche N, Laloum I, et al. Occult rat hepatitis E virus infection as a cause of cirrhosis and posttransplant recurrence: insights into the role of metagenomics. **Am J Transplant**. 2026. (*first and corresponding author*) - first demonstration of occult ratHEV infection causing cirrhosis and recurring after liver transplantation.
3. **Fourgeaud J**, et al. Chronic Aichi virus infection as a cause of long-lasting multi-organ involvement in patients with primary immune deficiencies. **Clin Infect Dis**. 2023. (*first author; J.F., M.M.L. and P.P. contributed equally*) - description of a new clinical entity in inborn errors of immunity.
4. Pérot P & **Fourgeaud J**, et al. Circovirus hepatitis infection in heart-lung transplant patient, France. **Emerg Infect Dis**. 2023. (*co-first author*) - identification of HCirV-1, the first hepatotropic human circovirus; associated patent.
5. Veyrenche N, Boluda S, Pérot P, et al., **Fourgeaud J**, Dheilly NM. One Health investigation into fatal encephalitis caused by pigeon paramyxovirus type 1, France. **Emerg Infect Dis**. 2026. (*co-senior author*) - One Health investigation of a fatal zoonotic encephalitis documented by metagenomics.

6. **Fourgeaud J**, Barry M, Bourgon N, et al. CMV vertical transmission rate according to IgG avidity value and valacyclovir treatment of maternal primary infection in the first trimester of pregnancy. **Clin Infect Dis**. 2025. (*first author*) - risk stratification in 561 pregnant women, directly informing France's universal first-trimester CMV screening.
7. **Fourgeaud J**, et al. Predictors of the outcome at 2 years in neonates with congenital cytomegalovirus infection. **Pediatrics**. 2024. (*first author*) - multicenter Cymepedia cohort; neonatal predictive model of long-term outcome.
8. **Fourgeaud J**, et al. Remdesivir for the treatment of human coronavirus OC43 encephalitis. **J Med Virol**. 2025. (*first author*) - diagnosis-to-treatment illustration of metagenomics changing patient management.
9. Riller Q & **Fourgeaud J**, et al. Late onset enteric virus infection associated with hepatitis (EVAH) in transplanted SCID patients. **J Allergy Clin Immunol**. 2022. (*co-first author*) - characterization of a hepatitis entity in transplanted SCID patients.
10. **Fourgeaud J**, et al. Fetal Zika virus infection diagnosed by metagenomic next-generation sequencing in amniotic fluid. **Ultrasound Obstet Gynecol**. 2023. (*first and corresponding author*) - proof of concept of mNGS for prenatal diagnosis of congenital infection.

COMPLETE PEER-REVIEWED PUBLICATIONS

Chronological, most recent first. Full author lists from PubMed; lists longer than 12 authors are truncated to the first 10 followed by et al. Bold marks my name; author position is annotated for first, co-first, co-senior, and second authorship, with corresponding authorship indicated where applicable. Complete records: PubMed.

2026

(second author)

Submitted: Fourgeaud J, et al. Innovative diagnostics and treatment of infections in transplantation: report from the 2025 Spring Highlights in Transplantation Sciences meeting (submitted March 2026). · A manuscript on population knowledge of CMV after the 2025 French universal screening recommendation (multisite cross-sectional survey, n=673) is in preparation.

PATENTS AND INTELLECTUAL PROPERTY

- **Patent DI 2022-17** (2022): *Identification of a novel circovirus in human hepatitis (HCirV-1)*. AP-HP (50%) / Institut Pasteur (50%). Personal contribution 12.5%: study design, characterization of the index hepatic sample, diagnostic interpretation.
- **Software invention declaration** (2022): *MyCMV*, decision-support tool for interpretation of CMV serology in pregnancy. AP-HP. Co-inventors: Fourgeaud J, Guillemot T, Ville Y, Leruez-Ville M, Vauloup-Fellous C. Deployed on AP-HP infrastructure; multicenter validation ongoing (NCT06694428).

INVITED LECTURES

International

- *Metagenomic evaluation of indeterminate hepatitis in immunocompromised patients*. Spring Highlights in Transplantation Sciences (HITS), Paris, March 2025.
- *Chorionic villus sampling or amniocentesis for prenatal diagnosis?* 3rd International Congress on Congenital CMV, Naples, November 2023.
- *Diagnosis of maternal infection: serology and other markers*. ESCV Workshop, Heraklion, April 2023.

National (France)

- *Contribution of metagenomics in unexplained intrauterine fetal demise*. 30th Fetal Medicine Days, Aix-en-Provence, September 2025.
- *Return from the “Virus et Greffes” mobility*. 3rd Virus and Transplantation Day, Paris, January 2025.
- *Parvovirus B19: a lasting outbreak*. 7th Days of Women’s and Fetal Imaging, Paris, November 2024.

SELECTED CONFERENCE PRESENTATIONS (CONTRIBUTED)

- Oral, 8th International Conference on Clinical Metagenomics, Geneva, 2023: performance of clinical metagenomics in France (prospective study).
- Oral, 25th and 23rd ESCV annual meetings (Milan 2023; Manchester 2021) and 26th ESCV (Frankfurt 2024): clinical metagenomics; Rift Valley fever outbreak in Mayotte; CMV genomic diversity in congenital infection.
- Oral, ECCI 2024 (Leiden): CMV genomic diversity; timing of maternal infection and sequelae.
- Oral, International Congress on Congenital CMV (Rome 2021; Naples 2023 and 2025): targeted neonatal screening; dating of maternal primary infection; MyCMV evaluation.
- Oral, 6th International Conference on Clinical Metagenomics, Geneva, 2021: the Necker-Pasteur clinical metagenomics program.
- Additional contributed orals and posters at French national meetings (SFM, JNI, RICAI, CREDIH) and ECCI, 2020-2026 (full list available on request).

TEACHING

- Faculty teaching at Université Paris Cité medical school, approximately 70 hours per year across the undergraduate medical curriculum (infectious agents course: arboviruses, viral hemorrhagic fevers, maternal-fetal infections), residency programs (Medical Biology: respiratory viruses, adenovirus, maternal-fetal infections), and a national inter-university diploma in fetal medicine (interpretation of serologies in pregnancy).
- **Co-lead**, arboviruses and viral hemorrhagic fevers curriculum, and maternal-fetal infection seminars, undergraduate medical program (about 120 students per year).
- **Program creator and coordinator**, maternal-fetal infection prevention track of the French national public health service-learning program (Service Sanitaire), Université Paris Cité, since 2024: one of two official pilot tracks; approximately 50 students per year across medicine, pharmacy, midwifery, and nursing; project-based pedagogy with field interventions. Program outputs include a 673-respondent community survey of CMV knowledge after the 2025 French universal screening recommendation (manuscript in preparation) and two national conference communications.
- Lecturer for 3 modules of the national MOOC on congenital CMV infection.

MENTORING AND SUPERVISION

- **PhD (ongoing, 2025-)**: Sonia Lacourt, Université Paris Cité (doctoral school ED 563 MTCI). *Congenital CMV infection in seropositive pregnant women: virological and immunological markers*. Principal co-supervisor (50%), with Dr Marianne Leruez-Ville; philanthropic funding (Cyme-Immune, Fondation Carrasso).
- **MSc**: Helena Mathey (2025), CMV genomic diversity by whole-genome sequencing, in collaboration with UCL Great Ormond Street Institute of Child Health; Rym Oudghiri (2026-2027), multi-compartment CMV genomic diversity in the first year of life (Cymepedia cohort).
- **Junior physicians (Docteur Junior, Medical Biology residency)**: Meryem Mekouar (2022-2023) and Mariame Barry (2023-2024); both projects led to first-tier publications with the trainee as co-author (J Clin Microbiol 2026; Clin Infect Dis 2025).
- Ongoing supervision of the clinical metagenomics team (3 specialized technologists, rotating junior physicians) and weekly program-wide results review.

ACADEMIC AND PROFESSIONAL SERVICE

- Deputy head, associated laboratory of the French National Reference Center for congenital CMV: national expert advice to clinicians and laboratories; weekly multidisciplinary fetal medicine board.
- Quality and accreditation leadership: ISO 15189 (COFRAC) accreditation of clinical metagenomics; national reference laboratory (LBMR) file.
- Scientific committee, organizer, moderator and speaker, national expert training day on CMV infection in pregnancy, Institut Imagine, Paris, May 2025.
- Manuscript reviewer: Ultrasound in Obstetrics and Gynecology, Pediatrics, Journal of Epidemiology and Global Health, BMC Infectious Diseases.
- Active member of the ANRS-MIE national virology network working groups (viral hepatitis; new technologies / metagenomics subgroup).

SCIENTIFIC SOCIETIES AND NETWORKS

- European Society for Clinical Virology (ESCV); member of the ESCV Network on Next-Generation Sequencing (ENNGS).
- European Congenital Cytomegalovirus Initiative (ECCI); co-author of the ECCI consensus recommendations (Lancet Reg Health Eur 2024).
- French Society for Microbiology (SFM).
- ANRS-MIE virology network (viral hepatitis group; new technologies / metagenomics subgroup).

AWARDS AND HONORS

- **Prix Sylviane Chatelain**, French National Academy of Pharmacy, 2023: PhD work on virus identification in unexplained diseases of immunocompromised patients.
- **“Virus et Greffes” mobility grant**, French Society for Microbiology, 2024.
- **AP-HP International Mobility Grant**, 2025 (competitive; funds the current UCSF year).

TECHNICAL AND METHODOLOGICAL EXPERTISE

- **Sequencing:** shotgun mNGS and metatranscriptomics; targeted enrichment (Twist Comprehensive Viral Research Panel, Agilent SureSelectXT); viral whole-genome sequencing (CMV and others); Illumina MiSeq/NextSeq operation; library preparation and QC.
- **Analysis:** metagenomic classification (One Codex; Microseek, Institut Pasteur), CMV haplotype reconstruction (HaROLD), alignment, variant calling, NGS QC metrics; currently extending to host-response RNA-seq analytics (Chiu laboratory).
- **Molecular virology and serology:** qPCR/RT-PCR, viral genotyping (including antiviral resistance), chromogenic in situ hybridization on tissue, serology interpretation at reference level.
- **Regulatory and quality:** ISO 15189 accreditation (COFRAC) of an mNGS diagnostic workflow; national reference laboratory (LBMR) standards.

Languages: French (native); English (working language: publications, international lectures, current research residency in the US).
